

Title13 SCT CART LOT START

Section A: Defining Medication Available Period (MAP) medications					
Trigger	When it starts a new LOT (N>=2)	LOT N start date	LOT N regimen scope	End-of-LOT (N-1) reason	Notes
ALLO SCT	Always.	ALLO_DT	No MM therapies in this LOT.	SCT_ALLO	ALLO LOT spans a single day: start = end = ALLO_DT.
CART	Always.	FIRST_CART_DT	Agents within 45d are consolidated into this LOT.	SCT_CART (or CART_INIT if CAR-T within 45d of first add in LOT_(N-1))	45-day consolidation window. Under CART_INIT the pre CART bridge drug only marks the switch, it does not makes its own LOT
Unplanned AUTO	Always unless 1. inside LOT_(N-1)s window (30d MED AUTO, 1D ALLO, 45D CART) or 2. <= 180d after a prior AUTO (planned tandem)	AUTO_DT	30d induction from AUTO_DT.	SCT_AUTO	A first ever AUTO can start a new LOT (LOT2-5 only; in LOT1 the first AUTO is induction) AUTOS < 60 days apart are considered to be single event and not counted as tandem or separate trigger
New MM agent	Always after LOT_(N-1) ended by DISCONTINUATION or MED_ADD with no SCT/CAR-T.	MAP_START_DT of new agent	30d induction window.	Discontinuation or MED_ADD - set by LOT (N-1)'s own end logic; a new MM agent does not override it	Any non-steroid or any non-biosimilar MM drug after LOT_(N-1) ends starts a LOT.
Death / STUDY_END (PRIMARY)	Never starts a LOT, ends follow-up.	n/a	n/a	DEATH / STUDY_END	Death or study end never start a LOT

Instruction:

- 1) The ProgMods tab can be copied (as required) to create multiple ProgMods tabs, according to the programming module in the study
- 2) Update the "Title" of the ProgMods to be descriptive (e.g. 5A.Baseline Characteristics)
- 3) List the newly added ProgMods tab(s) in Section C of the Cover tab
- 4) Delete any examples in grey italic text that are not relevant/applicable to the study once the programming specification has been finalized
