

Julia Moore Chat Shared Recap

Oh wow, this looks really nice. I will poke around on here more before our next 1:1 and let you know if I have additional thoughts

Thanks for this!

Julia Moore Friday 04:24

Also, following up on our discussion earlier:

1. yes if we could trace a few different types of patients through (from raw claims to final assigned LOT), looking at a mix of patients who receive LOT1-5, receive SCT or CART, patients with consolidation therapy around CART, etc.
2. For patients receiving POMA in 1L, this made me wonder, are there patients who receive SCT or CART that get included in our cohort? This would then be an indicator that patients are not treatment naive. Wondering if this is the case among 1L POMA pts and just generally
3. Is POMA highly associated with having evidence of any of the permissible cancers we allowing to occur in baseline?
4. Do POMA pts have evidence of clinical trial participation?
5. DO POMA pts have continuous pharmacy benefit (not just medical)? These cases could hide prior LEN/THAL "first-line" exposed outside observable pharmacy claims

Thank you!

Julia Moore is out of office and may not respond

Will share
