Q2 - POMA-1L patients who also received SCT or CAR-T

Q2 - POMA-1L patients who also received SCT or CAR-T

Q2 - POMA-1L patients who also received SCT or CAR-T

Split by transplant type and timing: later-line transplant is context, not a red flag. Cohort: NDMMM newly-diagnosed 1L study cohort.

Autologous SCT at 1L is standard first-line care and is NOT evidence of prior treatment.

The red flag is an allogeneic SCT or CAR-T that CLOSES the first line (end reason SCT_ALLO / SCT_CART / CART_INIT).

allo_or_cart_any_line is context only: the same therapy on a LATER line is expected progression, not a non-naive signal.

The vq5_q6_cart table gives the authoritative timing, INCLUDING CAR-T BEFORE LOT1 (from raw CAR-T claim dates).

LOT1-ANCHORED NDM CHECK (the study proof, shown directly in the table, anchored on LOT1_START_DT);

1 Q05 - POM-A-1L pharmacy-benefit continuity + hidden LEN/THAL

read the LOI-I-anchored columns (cege_12mo_pre_loi_len_thol_in_12mo_pre_loi) as the NDMM proof; the parent-index columns are supplemental. See the 'Optim coverage' tab for the coverage

4 LOT1-ANCHORED NDMM CHECK (the study proof, shown directly in the table, anchored on LOT1_START_DT):

ce_ge_lmno_pre_lot1 - POMALID patients with ≥ 12 months continuous enrollment before LOT1 (mirrors NDMM filter #1)
