1

Q2 - POMA-1L patients who also received SCT or CAR-T

2

Split by transplant type and timing; later-line transplant is context, not a red flag.

3

4

Autologous SCT at 1L is standard first-line care and is NOT evidence of prior treatment.

5

The red flag is an allogeneic SCT or CAR-T that CLOSES the first line (end reason SCT_ALLO / SCT_CART / CART_INIT).

6

allo_or_cart_any_line is context only: the same therapy on a LATER line is expected progression, not a non-naive signal.

7

The vqs_q6_cart table gives the authoritative timing, INCLUDING CAR-T BEFORE LOT1 (from raw CAR-T claim dates).

Q3 - POMA-1L vs other-1L: baseline other-cancer rate

L: baseline other-cancer rate

MALIGN_FLAG (>=1 inpatient OR >=2 outpatient claims within 30d per tumour group) - ELIG_COH retains these patients.

ire pct_other_cancer for POMA-1L vs other-1L; a higher POMA rate = association.

the pipeline flag (Step 22), not a raw C-code scan.

A1 Q4 - POMMA-1L vs other-1L: clinical-trial evidence

Q4 - POMMA-1L vs other-1L: clinical-trial evidence

CLINTRIAL_BASELINE / CLINTRIAL_FOLLOWUP from ELIG_COH_ATTRIBUTES (retained in the build).

A higher POMMA-1L trial rate would support the 'not truly first-line / unobserved therapy on trial' hypothesis.
Claims-based trial evidence is a lower bound (a fully masked study drug may carry no trial code).

2	See the 'Optum coverage' tab for the coverage validation.

4	poma_1l_pts = full POMA-1L denominator; poma_1l_with_index_span = those with a continuous span covering index							
5	(should match - if lower, investigate a LOT_LONG / ELIG_COH_FINAL / enrollment mismatch).							
6	Every Optum member has pharmacy benefit; obs_history_gt_6mo = POMA-1L patients with >6mo continuous pre-index
