Hi Onkar,

I spoke with the study team today and got some great feedback. Could we look into the following?

1. POMA is a common 1L medication in our LOT though is not expected in the frontline setting. Can we see among these patients:
 - a. How many have another cancer? What is the cancer? (they think these patients might be HIV-neg Kaposi)
 - b. What is the payer source of these patients? Are they medicare advantage?
 - c. Did any of these patients participate in a clinical trial (IE criteria 10)
2. Would it be possible to look at the top 25 regimens by year? (as prescribing patterns have changed)
3. Can you remind me, in the Sankey diagram (LOT1 Fig 9), there are some patients receiving 6-9 meds at 1L induction? And those are represented by the patient journeys you've added in the dashboard?

Thank you. The team is excited to see the entire LOT next time!

Best,

Julia
