Thank you Onkar, this is great.

Regarding Melphalan, can we look at the impact of applying this rule:

**If the first MELP dose is inside the induction window:**

- Next dose <180 days later → doesn't advance the LOT.
- Next dose ≥180 days later → advances the LOT (new LOT starts at that later dose).

**If the first MELP dose is outside the induction window:**

- Next dose <60 days later → advances the LOT, but the LOT actually starts back at the *first* dose (so that first dose becomes day 0 of the new LOT).
- Next dose 60–180 days later → doesn't advance the LOT (both doses stay in the current line).
- Next dose ≥180 days later → doesn't advance for the first dose, but the later dose (≥180 days) starts a new LOT on its own date.

\* MELP exposure = one administration (assume <30 days apart = same exposure). I have attached some patient examples too. Can we look at this at our next 1:1?

Best,  
Julia

Example 1 (current):

Example 1 (reclassified):

\* Patient received MELP outside their 1L induction window.  
\* Patient received MELP >60 days and <180 days after their initial MELP exposure  
\* MELP is retained as an add-on to 1L instead of advancing the line.
