Summary Statistics - Categorical Variables

Cohort: 1L treated mCRC (Cohort meeting inclusion criteria N = 38617)

Variable	Subgroup category	Overall		Academic only		Both academic and community		Community only	
		N	%	N	%	N	%	N	%
Overall	N	38,617	100.00	6,887	100.00	873	100.00	30,857	100.00
Gender	Female	17,050	44.15	3,051	44.30	387	44.33	13,612	44.11
	Male	21,562	55.84	3,836	55.70	486	55.67	17,240	55.87
	Unknown	5	0.01	0	0.00	0	0.00	5	0.02
Practice Type	Academic only	6,887	17.83	6,887	100.00	0	0.00	0	0.00
	Both academic and community	873	2.26	0	0.00	873	100.00	0	0.00
	Community only	30,857	79.91	0	0.00	0	0.00	30,857	100.00

Patient Characteristics

- Dashboard users must follow Flatiron terms and conditions when utilizing results: **Internal Data Source Terms and Conditions**
- Categorical variables: Denominator for the overall columns are based on the cohort that meets inclusion criteria selected (if any was select). The denominators for the strata-specific columns are based on the top row, which represents 100%
- All demographic/clinical characteristics have been searched in the baseline period defined as at any time prior to the index date, including the index date unless specified below. The value closest to the index date has been reported.
- ECOG search period (INDEX - 30 through INDEX + 7)
- Limited data cleaning is applied to raw data values, and thus point-of-entry errors from the raw data may exist and lead to unexpected results (e.g., implausible height and weight values). This is expected to impact a small number of patients/values.
- Biomarker search period (INDEX - infinity; INDEX + 14 days)
- For additional details, please refer to the **Footnotes**, Methods document (placeholder for Future), Specification document (placeholder for Future)
- Source data version used: 2026m05
