Hi Onkar,

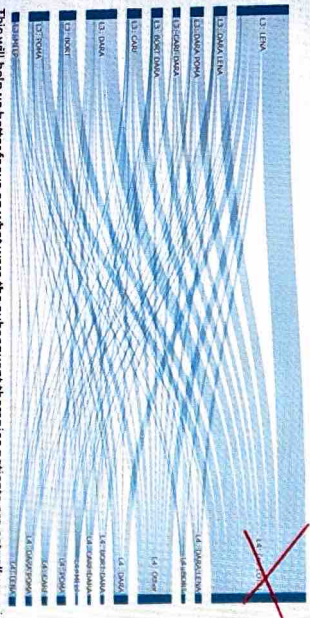

Thank you for sharing the dashboard—the team has found it very helpful so far. As far as next steps:

- The team reviewed this excel book together and would like to implement these groupings make a Sankey using these groupings: **MM Treatment Table for Protocol Xisk** (please ignore all comments from Peter, we have addressed them as a team). **Can you create a Sankey based off of the groupings in the excel book?**
- You'll notice the regimens in the excel book include steroids. **And so, the team wants to include steroids in the Lot (I am working on updating the LOT Rules to reflect this; can we make this update? I have found the following HCPCS codes [but I believe there are quite a few NDC codes, if I'm not mistaken?] and have added them to the programming spec:**

J7512	HCPCS	Prednisone
J1100	HCPCS	Dexamethazone
J1101	HCPCS	Dexamethazone
J8540	HCPCS	Dexamethazone

- Could we refine the current version of the dashboard to not showcase patients who go on to receive no subsequent LOT? For example:

LOT3 -> LOT4 (focused: top 10 sources, top 10 targets, remainder = Other)

This will help us better focus on what were the subsequent therapies patients are actually receiving.

- Can we also take a look at all of these new asks among Ashley's planned study cohort, which includes the following IEC criteria implemented (please show bullets 1-3 above amongst the whole cohort and the planned study cohort):

Inclusion Criteria

Overall study eligibility, as defined for TL NDM cohort

- MM diagnosis:** At least one inpatient medical claim with a diagnosis code for MM in any position (any ICD-9-CM-2003, or ICD-10-CM code-C90.0X) or a 2 outpatient medical claims for MM in any position on the claim, on separate days within 90 days, during the study period
 - As data in Optum CDM is collected primarily for health insurance and not research purposes, all MM diagnosis codes are to be considered. Inclusion will focus on defining NDM according to patients who are newly treated, defined as the receipt of a 1L treatment
- Adult age:** Aged ≥18 years in MM diagnosis calendar year
- Eligible 1L treatment:** Received an eligible treatment for MM (other than belatacept) on or after 01 Jan 2017 (eligible treatment period)
 - The 1L cohort index date is the date of the first claim for MM treatment within the identification period
 - Eligible treatments are defined as any treatment for MM except for treatments reserved strictly for later LOTs (see exclusion criteria)
 - For a full list of common therapies, see Annex 2
- Continuous enrollment (CE):** CE of at least 12-months with medical and pharmacy benefits before the 1L cohort index date and at least 6 months before the MM diagnosis. Patients with gaps in enrollment of ≤ 30 days are considered to be continuously enrolled
- CE during follow-up:** CE of at least 3-months during follow-up. For patients with an assigned date of death, ≤3 months after the index date, these patients are retained and have a limited follow-up period that ends at the assigned date of death

Category		Treatments	Common Use	NCCN Rec	Approval Notes	Links
Quadruplet regimens with anti-CD38 backbone	Daratumumab + Bortezomib + Lenalidomide + Dexamethasone (DVRd)	IL		TE NDMM: July 30, 2024. T1 NDMM: Jan 27, 2026		https://www.fda.gov/oc/ohrt/te-ndmm-july-30-2024
	Daratumumab + Carfilizomib + Lenalidomide + Dexamethasone (DKRd)	IL		Not approved as quad, but prior approvals for backbone. MASTER trial supports use		https://www.fda.gov/oc/ohrt/master-trial
	Daratumumab + Bortezomib + Cyclophosphamide + Dexamethasone (DVCd)	IL		Not approved as quad, but is trial supported		
	Daratumumab + Carfilizomib + Cyclophosphamide + Dexamethasone (DKCd)	IL		Not approved as quad, DKd approved on Aug 20, 2020		https://www.fda.gov/oc/ohrt/dkd-approved-aug-20-2020
	Isatuximab + Bortezomib + Lenalidomide + Dexamethasone (IsaVRd)	IL		T1 NDMM: Sept 20, 2024		https://www.fda.gov/oc/ohrt/t1-ndmm-sept-20-2024
Triplet regimens with anti-CD38 backbone	Isatuximab + Carfilizomib + Lenalidomide + Dexamethasone (IsaKRd)	IL		Not approved as quad, Isa-Kd is approved triplet (Mar 31, 2021)		https://www.fda.gov/oc/ohrt/isa-kd-approved-mar-31-2021
	Daratumumab + Lenalidomide + Dexamethasone (DVRd)	IL		RRMM: Nov 21, 2016 via POLLUX. T1 NDMM: June 27, 2019 via MAIA trial		https://www.fda.gov/oc/ohrt/rrmm-nov-21-2016-via-pollux
	Daratumumab + Bortezomib + Dexamethasone (DVRd)	IL		RRMM: Nov 21, 2016 via CASTOR		https://www.fda.gov/oc/ohrt/rrmm-nov-21-2016-via-castor
	Isatuximab + Lenalidomide + Dexamethasone (IsaRd)	IL		Not approved as triplet; there is no approved Rd alone (only in combo with len)		
	Bortezomib + Lenalidomide + Dexamethasone (VRd)	IL		SOC regimen, but not originally approved as a single fixed FDA "combination regimen"		https://www.fda.gov/oc/ohrt/soc-regimen
Other triplets	Carfilizomib + Lenalidomide + Dexamethasone (KRd)	IL		RRMM: Jul 24, 2015, does not have frontline named regimen		https://www.fda.gov/oc/ohrt/rrmm-jul-24-2015
	Bortezomib + Cyclophosphamide + Dexamethasone (VCd)	IL		Not approved as triplet; accepted through evidence		https://www.fda.gov/oc/ohrt/not-approved-as-triplet
	Lenalidomide + Dexamethasone (Rd)	IL				
	Bortezomib + Dexamethasone (VRd)	IL				
	Carfilizomib + Dexamethasone (KRd)	IL				
Doublets	Cyclophosphamide + Dexamethasone (CyDex)	IL				
	Lenalidomide	IL				
	Daratumumab	IL				
	2L and 3L					
	Daratumumab + Carfilizomib + Dexamethasone (DKd)	2L and 3L				
Triplets with anti-CD38 backbone	Daratumumab + Bortezomib + Dexamethasone (DVRd)	2L				
	Daratumumab + Lenalidomide + Dexamethasone (DVRd)	2L				
	Isatuximab + Carfilizomib + Dexamethasone (IsaKd)	2L				
	Isatuximab + Lenalidomide + Dexamethasone (IsaRd)	2L				
	Pomalidomide + Isatuximab + Dexamethasone (IsaPd)	2L and 3L				
Pomalidomide-based triplets (non-antiCD38)	Pomalidomide + Bortezomib + Dexamethasone (PVRd)	2L and 3L				
	Pomalidomide + Daratumumab + Dexamethasone (DPd)	2L and 3L				
	Pomalidomide + Carfilizomib + Dexamethasone (KRd)	2L				
	Carfilizomib + Lenalidomide + Dexamethasone (KRd)	2L				
	Carfilizomib + Cyclophosphamide + Dexamethasone (KVCd)	2L				
Other triplets	Bortezomib + Lenalidomide + Dexamethasone (VRd) (if not used in 1L)	2L				
	Selinexor + Bortezomib + Dexamethasone (SVd) ¹	3L only				
	Other quads					
	Daratumumab + Pomalidomide + Bortezomib + Dexamethasone (DPVRd)	RRMM				
	Daratumumab + Carfilizomib + Pomalidomide + Dexamethasone (DKPRd)	RRMM				
Other quads	Isatuximab + Carfilizomib + Pomalidomide + Dexamethasone (IsaKPRd)	Off-label				
	Isatuximab + Pomalidomide + Bortezomib + Dexamethasone (IsaPVRd)	Off-label				
	Daratumumab + Cyclophosphamide + Bortezomib + Dexamethasone (DKCRd)	Not common				
	Elotuzumab + VRd/KRd variants	Not common
