I spoke to the study team and have the following updates/questions regarding the LOT algorithm:

1. We will not include steroids. Please feel free to just "turn off steroids" in the LOT. The spec and the LOT rules still reflect that we are not including steroids so the programs should be the only place we should have to make this update.
2. Among patients that receive 1L DARA+BORT (dual therapy, no other agents present) are data and bort starting on the same day? Peter said it's unlikely someone would be prescribed both together, and it's more likely someone is prescribed one and then the other say 59 days later (inside the induction window). Please provide a summary of the difference in start date of agents amongst all pts receiving 1L DARA+BORT.
3. Peter says it's weird that no one is receiving LENA+DARA amongst the top 10 regimens 1L and 2L (a good percentage of patients should be receiving this combo regimen). Can you see what percentage of pts receive LENDA+DARA dual therapy in 1L or in 2L?
4. Peter says it's weird that Melphalan is a top 10 regimen in 2L. Can we look at the timing of when most patients are receiving MELP? It should have started to be phased out as a common 2L regimen after 2017.
5. Regarding CAR-T, we decided we are not going to change the LOT rules for CAR-T (considering there are so few pts with CAR-T in their 1L), though we would like to better understand how these patients are currently treated by the algorithm so they can be excluded for future study.
 - Are the patients with "CAR-T within 60d after LOT1 start" a subset of the pts with "CAR-T during or closing LOT1"?
 - Because "CAR-T before LOT1 start" = 0 and "CAR-T prior to or during LOT1" = 23, does this mean all 23 patients had CAR-T during LOT1?
 - Is "Any CAR-T on/after LOT1 start" a count of all instances of CAR-T during any line of therapy (2L+)?
 - Are there any patients with a CAR-T event on their LOT1 start date?
 - For patients that have CAR-T on say day 3, does that then become the start date of their 2L?

metric	n_patients	pct_of_totl
LOT1 patients (denominator)	11148	

CAR-T BEFORE LOT1 start (raw SCT claims)	0	0.00

Variable	13	0.12
CAR-T within 60d after LOT1 start (start-relative; not LOT-end capped)	13	0.12

CAR-T during or closing LOT1 [start, base end, +1d iff CAR-T closed LOT1]	23	0.21
---	----	------

CAR-T prior to OR during LOT1 (the ask)	23	0.21
---	----	------

1011 ended by CAB-T (and reason SCT CABT/CABT INTD

23 021
