Hi Onkar,

I have some follow up questions/feedback after my meeting with Ashley and Peter on Friday:

1. Can we refresh the dashboard? So that it removes steroids. Can we add to it a tab of all regimens per LOT? (users can download the csv for each long list)
2. Can we look at the patients who are receiving DARA+BORT in 1L (dual therapy, no other agents present) in our NDMM cohort? If this can be a csv of all patients that can be downloaded, Peter is particularly interested in:
 - a. How many cycles of each agent patients are getting (need to their individual long episodes and MAPs)
 - b. What are these patients receiving in 2L
 - c. When were these patients diagnosed?
 - d. Can we also look at these patients by region, cross tabulated with their payer/type?
3. We are potentially interested in changing the LOT rules for Melphalan and CAR-T. Can we see the impact of these 2 updated LOT rules?
 - a. If a MELP occurs ≥ 60 days and ≤ 180 days after the start of the first MELP MAP in a LOT, it does not advance the LOT. Otherwise, MELP should be treated as part of the LOT.
 - b. IF CAR-T occurs within the initial 60day induction window in LOT1, it does not advance the LOT and should be treated as part of LOT1.

Thank you, I will reschedule us another day or two out to allow time for these updates.
Best,
Julia
